Automotive sliding systems

**ACCURIDE INTERNATIONAL IS A
DEVELOPMENT PARTNER AND TIER2
SUPPLIER OF AUTOMOTIVE SLIDING SYSTEMS**

Renault adds Accuride International innovation to Scénic and GrandScénic minivans

Accuride International has developed and enhanced its expertise in center console management since the first sliding armrest was introduced into vehicles in 1997.

The latest innovation in this area is Accuride's Sliding Center Console. This mechanism allows free-moving space in the front seats area, while allowing the console and its features to be shared between the front and rear passengers.

In Europe, Renault has confirmed its role as an industry innovator by incorporating the Sliding Center Console into its very successful Scénic and GrandScénic minivans.

Within a very tight time frame, Accuride not only designed the sliding

system that sits beneath the console, but also prototyped it and took the project through all the necessary stages right up to manufacturing, for which Accuride built a completely new and modular assembly line.

For the first time in 20 years, Renault committed to a running change as a result of Accuride's technical expertise and customer commitment.

Accuride International works closely with automotive manufacturers, interior suppliers, and design and engineering specialists to develop unique features for automotive interiors that meet the stringent quality requirements of both manufacturers and drivers.

To discuss your specific application needs, call (562) 903-0490.
